

ArcVault Intake & Triage: workflow screenshots

Section A was captured in n8n Cloud from the live, published workflow. Section B shows the output of every workflow step for each of the five sample requests, rendered by `scripts/render_screenshots.py` directly from `records.json` (the records the live workflow returned). Sample #5 is the same record (`1cd7d42b...`) in both sections.

A. n8n Cloud

Published workflow canvas (12 nodes)

Executions: successful production runs

```

B. Step-by-step output for the 5 sample requests

Overview: all five records

ArcVault triage — structured output for the 5 sample requests							
Live n8n run · rendered from output/records.json · model openai/gpt-oss-120b							
#	Category	Priority	Conf.	Identifiers	Standard → destination queue	Escalated (rules)	Summary
#1 email	Bug Report	High	0.94	arcvault.io/user/jsmith 403 last Tuesday	engineering ↓ engineering	no	The customer cannot log in and receives a 403 error on account arcvault.io/user/jsmith, which started after the update last Tuesday. This is a high-priority issue affecting access to the service. Next step: engineering should investigate the authentication failure linked to the recent update.
#2 web_form	Feature Request	Low	0.94	bulk export audit logs	product ↓ product	no	The customer requests a bulk export feature for audit logs. They note that, as a compliance-heavy organization, this would save them hours each month. Add this request to the product backlog for future prioritization.
#3 support_portal	Billing Issue	Medium	0.95	#8821 \$1,240 \$980/month	billing ↓ human_review_escalation	yes billing_amount_over_threshold	Invoice #8821 shows a charge of \$1,240 but the contract rate is \$980/month, a \$260 discrepancy. This billing difference exceeds the \$500 escalation threshold, so it requires immediate human review. Action: assign to a billing specialist to investigate and adjust the invoice as needed.
#4 email	Technical Question	Low	0.92	SSO Okta	technical_support ↓ technical_support	no	The customer asks whether SSO with Okta can be set up for their organization. This is a low-priority technical question about authentication options. Next step: provide the standard documentation and steps for configuring Okta SSO in ArcVault.
#5 web_form	Incident/Outage	High	0.96	dashboard 2pm EST	incident_response ↓ human_review_escalation	yes incident_category outage_language	The customer reports that the dashboard stopped loading around 2pm EST and multiple users are affected. This is a high-priority incident affecting several users. Escalate to human review for immediate investigation of the dashboard outage.

Sample #1 — workflow steps

Live n8n run · record_id 23ad2fd8-e074-475c-b678-7f3c703c5550 · received 2026-09-21T20:11:58.087Z · model openai/gpt-oss-120b · rendered from output/records.json

STEP 1 · INGESTION

Webhook → Normalize (n8n nodes: Webhook, Normalize)

source

email

raw_message

Hi, I tried logging in this morning and keep getting a 403 error. My account is arcvault.io/user/jsmith. This started after your update last Tuesday.

STEP 2 · CLASSIFICATION (LLM)

Category, priority, confidence (Classify (LLM) → Parse Classification)

category	Bug Report
secondary_categories	none found
priority	High
confidence	0.94 (threshold 0.70)
rationale	'tried logging in... keep getting a 403 error' for a single account

STEP 3 · ENRICHMENT (LLM)

Core issue, identifiers, urgency (Enrich (LLM) → Parse Enrichment)

core_issue	The customer cannot log in and receives a 403 error.
account_ids	arcvault.io/user/jsmith
invoice_numbers	none found
error_codes	403
urls	arcvault.io/user/jsmith
monetary_amounts	none found
products_or_features	none found
other	last Tuesday
urgency_signal	High "403 error" "logging in"
dropped (not in text)	none found

STEP 4 · ROUTING (CODE)

Queue decision (Route & Escalate)

standard_queue	engineering
destination_queue	engineering
routing_reason	Bug Report -> engineering (category mapping, confidence 0.94).

STEP 6 · HUMAN ESCALATION FLAG (CODE)

not escalated

no escalation rule fired

security_signal (advisory) — matched: 403; priority already High, no change; not escalated on its own

STEP 5 · STRUCTURED OUTPUT

Summary for the receiving team (Summarize (LLM) → Assemble Record → Publish to Queue → Respond)

The customer cannot log in and receives a 403 error on account arcvault.io/user/jsmith, which started after the update last Tuesday. This is a high-priority issue affecting access to the service. Next step: engineering should investigate the authentication failure linked to the recent update.
